Education

University of Michigan, Ann Arbor **September 2017 – June 2023**
Ph.D. Material Science and Engineering *Ann Arbor, MI*

- Thesis: Recovering Material Chemistry and 3D Structure at near Atomic Resolution

Arizona State University **September 2013 – May 2017**
Bachelor of Science, Chemical Engineering *Tempe, AZ*

Publications

1. **J. Schwartz**, Z.W. Di Y. Jiang, A. Fielitz, D.H. Ha, S. Perera, I. Baggari, *et. al.* "Imaging Atomic-Scale Chemistry from Fused Multi-Modal Electron Microscopy" *npj Computational Materials* **8**, 16 (2022).
2. **J. Schwartz**, *et. al.* "Real-Time 3D Analysis During Electron Tomography using tomviz" *Nature Communications* (Accepted).
3. M. Cao, **J. Schwartz**, H. Zheng, Y. Jiang, R. Hovden, Y. Han "Atomic Defect Identication with Sparse Sampling and Deep Learning" *Communications in Computer and Information Science* **1512** (2022).
4. **J. Schwartz**, H. Zheng, M. Hanwell, Y. Jiang, R. Hovden, "Dynamic Compressed Sensing for Real-Time Tomographic Reconstruction" *Ultramicroscopy* **219** (2020) 113122.
5. **J. Schwartz**, Y, Jiang, Y. Wang, A. Aiello, P. Bhattacharya, H. Yuan, *et. al,* "Removing Stripes, Scratches, and Curtaining with Non-Recoverable Compressed Sensing," *Microsc. and Microanal.* **25** (2019) 705-710.

Research Experience

University of Michigan **August 2017 – Present**
Graduate Research Assistant, Electron Microscopist *Ann Arbor, MI*

- Designed an image processing algorithm (written in Python and C++) that improves signal-to-noise over 500% by correlating simultaneously acquired multi-modal chemical signals collected inside the electron microscope.
- Deployed quantum mechanical electron scattering simulations (producing > 7 TB of data) on GPU-accelerated Supercomputers at Oak Ridge National Lab to validate dose-requirements for atomic-resolution tomography algorithms.
- Developed efficient multi-threaded tomography algorithms with OpenMP/MPI, CUDA, and C++ wrapped in a Python interface to achieve over a 10x performance speed-up, enabling the real-time 3D analysis of volumetric data.
- Automated tomography experiments on electron microscopes with an easy-to-use GUI for user intervention.

Arizona State University **January 2016 – May 2017**
Undergraduate Research Assistant *Tempe, AZ*

- Built field-effect transistors with MoS_2 2D flakes to measure electrical property enhancements due to chemical doping.
- Fabricated 2D materials (e.g. graphene) with chemical vapor deposition and characterized with Raman Spectroscopy.

Harvard University **Summer 2016**
Center for Nanoscale Systems Researcher *Cambridge, MA*

- Designed and constructed micro-heating devices with AutoCAD and nano-fabrication techniques (e.g. lithography).

Projects

Classifying Crystal Symmetry with Distributed Deep Learning | *Keras, Horovod* **Summer 2020**

- Trained popular convolutional network architectures (e.g. ResNet51) with $> 10^6$ simulated diffraction images on a HPC-system using mutli-GPU and multi-node data parallelism. Obtained 55% classification accuracy on the test dataset.

A2C and DDPG Implementation | *PyTorch, OpenAI Gym* **Fall 2019**

- Trained reinforcement learning algorithms on environments available with OpenAI gym API using HPC systems.

Tools/Skills

Software: Python, MATLAB, C/C++, CUDA, OpenMP/MPI, LaTeX, GitHub, Bash

Experimental: *Microscopes*: SEM, TEM, S/TEM, *Spectroscopy*: EDX, EELS, *Clean-room*: PVD, CVD, Lithography

Relevant Coursework

- Deep Learning for Computer Vision
- Optimization Methods for ML
- Machine Learning (ML)
- Computational Data Science
- Quantum Mechanics
- Condensed Matter Physics
